

What is the International Code Council?

- ICC is an ANSI accredited Voluntary Consensus Standards Developer.
- ICC is a non-profit org.
- ICC develops the building, energy conservation and other codes and standards that specify minimum construction requirements in all 50 states, and most Federal agencies that own/operate buildings

Current IRC/IBC/IECC/IgCC provisions

- IRC: E3702.13 Outlet for electric vehicle charging systems shall be supplied by a separate branch circuit.
- IRC: Appendix U Solar-ready provisions
- IECC: RB 103 Solar- ready zone requirements for new homes with over 600 sq.ft roof area oriented between 110 and 270degrees of due north. Includes 103.7, Electrical service reserved space at main electrical panel.
- Numerous IBC, IRC provisions governing solar collectors, pv panels, solar thermal systems. (collected for convenience in ISEP)
- IgCC – provision for minimum number of parking spaces for low-e, hybrid, electric vehicles, where parking provided; minimum 5%, or minimum 2 spaces

New in 2018

- CE 248-16
- IECC Commercial: Adds exception to scope of total building performance compliance calculation:
 - Exception: Energy used to recharge or refuel vehicles that are used for on-road and off-site transportation purposes.
- IECC Residential: adds same exception for energy used to recharge or refuel a vehicle from ERI reference design or rated design.

Participating in the development of new code requirements

- cdpACCESS makes participation much easier, and accessible to all.
- no cost to register, propose a change or participate in hearings and testify in favor of/ opposition to of code changes
- anyone can review proposals online, file comments on code changes following the PCH hearing
- governmental units with voting rights can participate in person (recommended), or in OGCV process
- appoint individuals to all voting positions, and use the votes you are entitled to
